EDUCATION

Florida International University

Miami, FL

Bachelor of Science in Computer Science

Expected Summer 2027

- **Awards:** Bright Futures Medallion Scholarship
- **Relevant Coursework:** Java Programming 1 & 2, Data Structures & Algorithms, Algorithm Techniques, Operating Systems, Software Engineering, Software Testing, Discrete Structures, Physics, Database Management, Intro to Machine Learning
- **Organizations:** INIT | Ignite Student Mentor | AWS Student Builders

CERTIFICATIONS

AWS Academy Graduate: Cloud Foundations | *AWS Academy*

Sep. 2026

Java Programming II MOOC | *University of Helsinki*

Apr. 2024

Java Programming I MOOC | *University of Helsinki*

Mar. 2024

Blockchain and Cryptocurrencies: Applications & Technical Principles | *FIU*

Dec. 2022 – May 2023

TECHNICAL SKILLS

Languages: Java, JavaScript, HTML/CSS

Frameworks: Spring Boot

Developer Tools: Git, GitHub, VS Code, Figma

Databases & Cloud: PostgreSQL, H2, Heroku, AWS

Backend & APIs: REST APIs, HTTP/HTTPS, Cookie/Session-based Authentication, LLM Integration (Claude, Gemini, Grok)

PROJECTS

Aviary | *Spring Boot, PostgreSQL, HTML/CSS/JS, Thymeleaf*

Live | GitHub

- Engineered a Spring Boot maintenance tracker on a **9-table PostgreSQL database**, flagging service due by date or engine hours
- Secured multi-user data with Spring Security, BCrypt, and CSRF tokens; ownership checks **block cross-account access with HTTP 403**
- Built a **2,500-line vanilla-JS dashboard** with drag-to-reorder rows and edits that **save automatically, no Save button needed**
- Automated a GitHub Actions pipeline that runs **96 JUnit tests** before every Heroku deploy, **so broken code never goes live**

Deadhead | *Java 21, Spring Boot, PostgreSQL, Anthropic API*

Live | GitHub

- Engineered a Spring Boot trip planner that finds the **cheapest week of charter flying**, weighing fly-home, Uber, and hotel options
- Used Dijkstra's algorithm to find the lowest-cost plan, **skipping any option that misses a scheduled trip**
- Wrote **21 JUnit tests**, including one proving that **pilots can't see each other's flights, settings, or API keys**
- Integrated the Anthropic API to turn plain-English calendar events into trips, with a free fallback matching **85k airport codes**

RapidAid | *AWS Amplify, Cognito, AppSync/DynamoDB, React, Gemini API*

Live | GitHub

ShellHacks 2025

Sep. 2025

- Shipped a disaster-relief app **in 36 hours** with a 4-person team, auto-classifying aid requests by need via the Gemini API
- Re-architected solo onto **5 AWS services** (Amplify Gen 2, Cognito, AppSync, DynamoDB, Lambda), **keeping the Gemini key out of the browser**
- Hardened the Lambda to validate Gemini output against allowed categories, **defaulting invalid responses to "Other"** instead of failing
